

金屬探測門（安檢門）

PC15000 型號

PC15000 應用最先進的技術

附有 33 多區域準確檢測的金屬探測門（安檢門）

應用：機場，海港，建築，體育活動等。

無盲點通過 33 多區域檢測，高辨別模式為各種金屬物體編程。

Walk Through Metal Detector Model Selection

Model PC15000 33 Multi-Zone Walk Through Metal Detector

- Introduction
 - Technology : DSP, 33 multi-zone, Bi-Detection, High Discrimination, Multiple
 - Model PC15000 is the most accurate 33 multi-zone metal detector has been applied most advanced technology.
 - Application: Airport, Seaport, Building, Sports Event, and etc.
- Main Feature
 - None blind spot by 33 multi-zone detection
 - Instant and accurate detection by using most advanced DSP.
 - Bi-detection technology eliminates the sensitivity difference between panels.
 - High Discrimination modes for various metal objects are programmed.
 - Access Control system,
CCTV and other security equipment can be integrated using I/O ports.
 - Remote Controller is available
 - 1~99 units can be operated by controlling program on computer.

Model PC13000 Super High Sensitive Walk Through Metal Detector

- Introduction
 - Technology : Super Sensitivity, Bi-Detection, Discrimination, Multiple Modes
 - Model PC13000 is the most sensitive metal detector that Super Sensitivity Technology is applied.
 - Model PC13000 has high Discrimination abilities and it is very useful for detection small electronic objects and jewelry.
 - Application: Prison, Court, Hospital, Factory, and etc.
- Main Feature
 - Applied Bi-Detection and super Sensitivity technology applied.
 - High Discrimination modes for various metal objects are programmed.
 - Access Control system,
CCTV and other security equipment can be integrated using I/O ports.
 - Remote Controller is available
 - 1~99 units can be operated by controlling program on computer.

Installation Data

- Power : 110/220 AC Volts, 50/60Hz
- Temperature : -50°C ~ +55°C
- Moisture : 0~95%, Non-Condensing
- Dimension : 870W x 550D x 2200H(mm)
- Passenger Clearance : 750W x 2000H(mm)

Packing information

- Weight : 50kg/60kg(Created)
- Antenna Panel : 2400L x 600W x 300H(mm)
- Controller : 760L x 230W x 200H(mm)

Option Features

- Carrying Bag
- Remote Controller
- PC Control Synchronization Cable
- Emergency Battery Module & Recharging Battery

Technical Feature & Certifications

Technical Feature

• Advanced DSP

Through the use of Digital Signal Processing (DSP), this system exhibits extraordinary noise reduction and increased operating reliability. Instant and accurate detection is possible by using most advanced DSP.

• Advanced DSP

33 Multi-zone Technology can display the position of metal objects in 33 different zone that is divided vertically and horizontally.

• Bi-direction

Bi-direction Detection System provides multi-field detection within the entire archway. The patented antenna and electronics system is combined with specially designed software. These physical resources produce the lowest false alarm rate for any given target.

• Discrimination

Model PC15000 has a function of high discrimination. It can reduce the response to normal metal object that a person can possess usually like keys, coins, watch and so on. Model PC15000 provides variable detection programs. By selecting program, operator can change the response to normal metal object and to other metal object easily. Programming includes preset detection programs as specified by internationally recognized authorities, and various metal specific programs.

• Super High Sensitivity

Jewon's experience and cure technology has been developed based on principle of metal detection system. Jewon has developed very high sensitive metal detection system. Jewon's Super Sensitivity technology can be detected very small metal objects and applied to anti-theft program with Discrimination Program

• Multiple Mode

Jewon Security Ltd. Developed various detection programs and applied its cure technology to walk through metal detectors. Through the detection program, walk through metal detector can be operated suitable for each situation like in prison, airport, building, sports event, or factory for anti-theft. Operator can select and save program for more convenience and efficient checking circumstance.

• Easy User Interface

Using 4 buttons, operator can change the setting value of the program.

• 4 digit Security key

To access main program, it is required to input 4 digit password. User can change password and program it.

• Auto Calibration

Model PC15000 has a function of Auto Calibration. The function of Auto Calibration provide a finest performance.

• Synchronization

Model PC1500 can be operated with another units without synchronization cables.
